

Clean Organic Food transport in Vienna

In Vienna, the company **Heavy Pedals** has been offering delivery services by cargo bike for many years. In addition to the **delivery service by cargo bike**, the company also sells cargo bikes and develops mobility solutions by cargo bike. All this long before the cargo bike became a trendy vehicle in many European cities. For many years, the company has also been involved in research and development projects and is also a member of Thinkport Vienna.

This is not surprising, as cargo bikes are not only superior to motorised vehicles in inner-city areas in terms of speed, but also offer more **flexibility in terms of access**. Furthermore, they also **make economic sense**, as they are not only cheaper to buy, but also to operate. The biggest plus points are undoubtedly that they are **emission-free and space-saving**.

It is therefore not surprising that two other companies that consider environmental protection very important have the delivery of their products organised by cargo bike. Two **producers and distributors of organic fruit and vegetables in Vienna** have many of their food packages delivered by cargo bike. A dynamic hub and spoke system in the city is used for this purpose, and there is storage space for both companies in the city centre. Delivery is done with a **combination of delivery vans and cargo bikes**.

In total, over **25,000 addresses are supplied annually and receive over 30,000 vegetable and fruit boxes**. For one company alone, **up to 120 addresses** are delivered by cargo bike on one day with up to 3 tours run per bike.
